

WE'RE HIRING!

**Attention: Physics professors
with interest in philosophy**

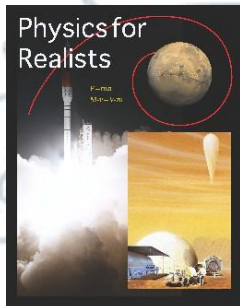

The Collegium Sanctorum Angelorum is in need of a physics professor for the Fall 2024 semester.

Requirements: Ph.D in physics (ABD will be considered), practicing Catholic, preferably some teaching experience. Preference will be given to those who can teach philosophy of mathematics and/or biology as well. Course likely taught online, unless you live in the area.

Description: The Collegium's math and science program is unique among higher education programs. We aim to present a unified and integrated curriculum to our students which opens up to them the knowledge of the world around us. To this end, the physics course is meant to follow upon the course in natural philosophy, in which the students discover the basic principles of our knowledge of natural things and the idea of motion in general. This course picks up on what we know through common experience and adds the mathematics tools which physics uses to measure and quantity natural objects, but without abandoning the notions of form and matter, and the four causes.

Compensation: \$3500

Textbook: We would prefer to use the textbook *Physics for Realists*

Send CVs and Letters of Interest to Phillip Berns at pberns@the-collegium.org.
